

Pal-Air Scissor Lift Tables

OVERVIEW

Pal-Air Tables are a quality Australian made scissor lift unit designed to eliminate bending when loading or unloading palletised goods. Once the correct pressure has been set, Pal-Air Tables automatically keep the working area at the required height. The load capacity is adjusted in seconds by inflating or deflating the airbag. To avoid reaching and stretching the load can be roated on a 1500kg capacity scissor mounted turntable. With a durable powder coated finish and a hard-wearing air bag that requires little maintenance, Optimums Pal-Air tables are a great investment for any palletising operation.

FEATURES

Suitable for loads up to 1500kg

- ✓ Change load capacity in seconds by inflating or deflating airbag
- ✓ Durable air bag requires little maintenance and no lubrication
- ✓ Tough Australian made product with 2 year warranty
